MS Word

MS Excel

MS-Word

- Microsoft Word (MS Word) is one of the most famous word-processing software.
- It allows users to type, edit, format, and save text-based documents.
- It has advanced features like tables, images, advanced formatting and reviewing that give its users the ability to customize their documents as required.
- Even most of this book has been written, edited and formatted on MS Word.

MS-Excel

- Microsoft Excel (MS Excel) is one of the most famous spreadsheet software.
- It allows users to store, organize, calculate, and analyze data using rows, columns, and cells.
- It has advanced features like formulas, functions, charts, pivot tables, and conditional formatting that give users the ability to customize and visualize their data as required.
- Even most of this book's data tables and calculations could be managed and analyzed on MS Excel.
